

ADVANCED PROGRAMMING PRACTICE (21CSC203P)

Unit – 2 : Session – 2 : SLO – 1 | Data Types and Variables

Name: ANUSHKA JAIN ANUSHKA JAIN | Reg. No: RA2511003011974 | Solved Worksheet

Activity (Solutions)

- Output of BoolTest:
- b is false
- b is true
- This is executed.
- $10 > 9$ is true
- (The second if(b) with b=false prints nothing.)
- Static vs instance variable: A STATIC variable belongs to the class — one shared copy for all objects, created at class loading, accessed as `ClassName.var`. An INSTANCE variable belongs to each object — every object gets its own copy, created with `new`, accessed via the object reference. Changing a static variable affects all objects; changing an instance variable affects only that object.
