

ADVANCED PROGRAMMING PRACTICE (21CSC203P)

Unit – 3 : Session – 2 : SLO – 1 | Creating Threads by Extending Thread

Name: ANUSHKA JAIN ANUSHKA JAIN | Reg. No: RA2511003011974 | Solved Worksheet

Worksheet (Answers)

- Fill: In Java, a class can create a thread by extending the `Thread` class.
- T/F: The `run()` method contains the code that is executed by the thread. — TRUE
- MCQ: Method used to start a Java thread → C) `start()`
- Fill: A Java thread moves to the `RUNNABLE` state after calling the `start()` method.
- T/F: The `run()` method is called directly to create and start a new thread. — FALSE (`start()` must be called; `run()` called directly executes on the current thread)
- MCQ: Keyword used to define a subclass of `Thread` → B) `extends`
- Fill: Calling `start()` on a `Thread` object internally calls the `run()` method.
- T/F: A Java program can have multiple threads running at the same time. — TRUE
- MCQ: Valid way to create a thread → A) Extend the `Thread` class
- Fill: The `Thread` class is part of the `java.lang` PACKAGE.
