

ADVANCED PROGRAMMING PRACTICE (21CSC203P)

Unit – 1 : Session – 8 : SLO – 2 | Implement Threading

Name: ANUSHKA JAIN ANUSHKA JAIN | Reg. No: RA2511003011974 | Solved Worksheet

Activity (Solutions)

- 1) Hello thread: `class Hello extends Thread { public void run(){ System.out.println("Hello"); } } new Hello().start();` — or `new Thread() -> System.out.println("Hello").start();`
- 2) Even/odd threads: `Thread even = new Thread() -> { for(int i=2;i<=10;i+=2) System.out.println("Even "+i); };` `Thread odd = new Thread() -> { for(int i=1;i<=10;i+=2) System.out.println("Odd "+i); };` `even.start(); odd.start();` — outputs interleave nondeterministically.
- 3) sleep and join: `Thread t = new Thread() -> { try { Thread.sleep(500); } catch(InterruptedException e){ } System.out.println("child done"); };` `t.start(); t.join();` // main waits until t finishes `System.out.println("main done");` — `sleep(ms)` pauses the current thread; `join()` makes the caller wait for the other thread's termination, so 'main done' always prints after 'child done'.
